

BINDAN M

 Greater Noida, UP  bindangooli@gmail.com  github.com/bindan-gooli

Motivated Computer Science undergraduate with strong technical depth in software development, high-frequency trading systems, and AI-driven fraud detection. Expert in Python, Java, and SQL with hands-on experience building autonomous agents and real-time monitoring platforms. Published researcher in credit card fraud detection with a demonstrated ability to deliver innovative full-stack solutions and excel in competitive technical environments (HackAccino Top 10).

TECHNICAL SKILLS

Languages: Java, C++, Python (Advanced), SQL

AI & ML: XGBoost, Scikit-learn, PyTorch (LSTM), Gemini API

Web & Data: Node.js, React, Tailwind, Supabase, PostgreSQL

Tools: Docker, Git, Streamlit, Plotly, Project Management

SELECTED PROJECTS

Crypto Guard: Hybrid Fraud Detection & Ultra-Scalper

2024 - Present

Advanced AI Trading & Security Suite

- Engineered an autonomous high-frequency scalper capable of executing 30+ trades/hour with a "Wait & Confirm" strategy (2nd best logic).
- Developed a hybrid fraud detection model using Isolation Forest and XGBoost for real-time market anomaly identification.
- Built a live Streamlit dashboard featuring real-time candlesticks, multi-position tracking, and profit/loss visualization.

Python • XGBoost • Streamlit • Binance API

Credit Card Fraud Detection AI Model

2023 - 2024

Published Research Project

- Optimized ML algorithms to process 10M+ data points with 99%+ accuracy in fraud classification.
- Presented and published under the college committee; analyzed complex transactional patterns to reduce false positives.

Scikit-learn • Data Analysis • Academic Research

AI Multi-Modal Chatbot & Voice Assistant

2024

Gemini API-powered Conversational Agent

- Developed an intelligent conversational agent utilizing Google's Gemini API for multi-modal interaction (Text, Image, and Voice).
- Integrated real-time Speech-to-Text (STT) and Text-to-Speech (TTS) pipelines to enable seamless voice-enabled automation and command execution.

Python • Gemini API • STT/TTS • Automation

Facial Recognition Attendance System

2024

Computer Vision-based Authentication

- Engineered an automated attendance tracking system using OpenCV and deep learning-based facial embeddings for real-time identification.
- Implemented a robust detection pipeline that maintains high accuracy across varying lighting conditions, streamlining campus management.

Python • OpenCV • Deep Learning • SQLite

Campus Food Ordering System (Full Stack)

2024

Web Platform for Efficient Campus Dining

- Architected a queue-free ordering system using React and Supabase, managing real-time orders for thousands of students.
- Integrated PostgreSQL for secure transactional data management and Tailwind CSS for a premium mobile-first UI.

React • Node.js • Supabase • PostgreSQL

EXPERIENCE

Freelancer – Uber Scaled Solutions

Aug 2024 – Dec 2025

Strategic Technical Solutions

- Conducted deep market research to identify emerging technical trends and supported strategic planning for high-scale clients.
- Collaborated with global teams to develop innovative software solutions and delivered presentations for senior stakeholders.

EDUCATION

B.Tech in Computer Science

Expected Dec 2028

Bennett University, Greater Noida

- Scholarship Recipient for academic excellence.
- Core focus: Data Structures & Algorithms, Machine Learning, Database Design.

ACHIEVEMENTS

- **HackAccino 4.0:** Secured Rank 9 among 1,000+ national-level participants.
- **Certifications:** Completed Advanced AI and Data Science specializations from Coursera & NPTEL.
- **Community:** Active presenter at academic events; technical mentor for AI projects.
